## ***2019 Champion of Small Business Technology Commercialization Winners***

The following winners of the Small Business Technology Council's 2019 "Champion of Small Business Technology Commercialization" Awards represent some of the best PMs, PEOs, and COs in government. They were nominated by SBIR/STTR firms for going above and beyond in helping small businesses, whether through pursuing commercialization/follow-on awards, streamlining the awarding process to transition technology faster, or otherwise advocating or promoting small business role in government contracting.

All of these winners were praised for their leadership, knowledge, and diligence in working to advocate for and assist small business in receiving the resources they need to advance their technologies, while at the same time meeting the needs of the agency they work for. The SBIR program is a partnership between small business and government, and without their assistance, many of the high-tech innovations these companies will produce would never have had the chance to succeed.
